ABSTRACT

This directory profiles 98 science and engineering libraries in the New York City area. The libraries that have been selected are those most easily accessible to the public. The entries for the libraries are alphabetically arranged and numbered sequentially, and each entry provides the following information: the founding year; subject coverage; address; phone number; hours; contact person; whether the library is open to the public; special collections; and a listing of the library's online services, if any. An index by library name concludes the directory. (MAB)

JUNE, 1990

PURPOSE

The purpose of the reassignment leave for the Spring 1990 (May 7 - June 5) semester was to complete work on the preparation of a GUIDE TO SCIENCE AND ENGINEERING LIBRARIES IN THE NEW YORK CITY AREA.

INTRODUCTION

Undergraduate students, graduate students, faculty and rssearchers at City University will find this guide useful when conducting their search for research materials not available at the Science/Engineering Library of City College. The guide will provide a comprehensive description of the holdings of the libraries listed. It will serve as a vital resource, listing various repositories containing a wealth of information in the five boroughs of New York City.

PROCEDURES

Activities performed during this reassignment leave included the following:

a. A revised list of approximately one hundred Science and Engineering libraries in the New York City area was finally compiled to be included in the directory.

b. Entries to be included in the guide were selected from various directories listed in the previous report (1989).

c. Additional telephone calls were made to the remaining libraries to verify address, telephone number, contact person, hours available for service, accessibility to the public and the availability online services.

d. Additional libraries added to the list were visited to examine various aspects of the collection.

e. Library entries are in alphabetical arrangement, and are numbered sequentially. An index follows listing all libraries included in the guide with page number.

CONCLUSION:

This directory consists of a select number of Science and Engineering Libraries in the New York City area. It in no way attempts to include all libraries. Libraries selected have been those which are easily accessible to the public.

Having visited most of the libraries on the list, I was able to gain a better understanding of functions and services available to the public.

This has been a rewarding undertaking, one I wish to share with students and faculty when providing reference services at the Science/Engineering Library. Reference librarians from other CUNY units will also find the guide to be a valuable outside source of Science and Engineering Libraries.
